

Advanced Aerobatics Courses

Go beyond the basics and roll with Australia's champions!

The Australian Aerobatic Academy's "post-graduate" aerobatics courses are designed to expand your aerobatic repertoire and increase your skills to be capable of world-class aerobatics!

These courses build upon the AAA Basic Aerobatic Course with additional manoeuvres and skills. You will begin with advanced rolling manoeuvres, followed by combination manoeuvres and ultimately low level aerobatics below 3000' AGL as your skills and experience increase.

AAA's advanced aerobatics courses are closely aligned with the Australian Aerobatic Club competition grades to allow graduates to compete upon completion. Aerobatic competition is the best way to provide feedback on your skills and challenge you further as you strive for perfection.

Once you have mastered the capability of the Robin 2160i, AAA offers an upgrade to the ubiquitous Pitts Special S-2A—the aircraft that has made more aerobatic champions the world over than any other aircraft! With it's higher roll rate, greater horsepower and capability of sustained negative G manoeuvres, the Pitts Special is an excellent aircraft to begin your transition to higher-performance aerobatic aircraft in time.

With AAA's rich competition heritage, you can be assured of being trained by Australia's top aerobatic instructors and pilots! AAA's Chief Flying Instructor has been active in competition aerobatics for the past 20 years as a competitor, coach, judge and contest organiser. AAA has fielded a team to almost EVERY Australian competition since it's inception, with competitors in every grade from Entry to Unlimited!

Progression through our post-graduate aerobatics courses is very much as your time, funds and desires permit. Each manoeuvre includes a briefing and aircraft are charged at standard rates. Once competency is attained you can practice to your heart's desire until you decide to add a new figure to the sequence. As such, course costs will vary between individuals.

Forget the rest—learn with the best!

Course	Course Elements
Entry Category Aerobatics	Barrel rolls
	Competition wing-overs
	Inverted flight and slow rolls
Graduate Category Aerobatics	Competition spins
	Cuban eights
	Roll-off-the-top ("Immelmann")
Sportsman Category Aerobatics	Flick ("snap") rolls
	Hesitation rolls
	Combinations of lines, loops and rolls
Low Level Aerobatics Flight Activity Endorsements	Aerobatic sequence design, geographic positioning, energy management, safety heights.
	1500' - 500' AGL Flight Activity Endorsements
